One IR, two real builders

PPTSmith v2 shared builder acceptance deck.

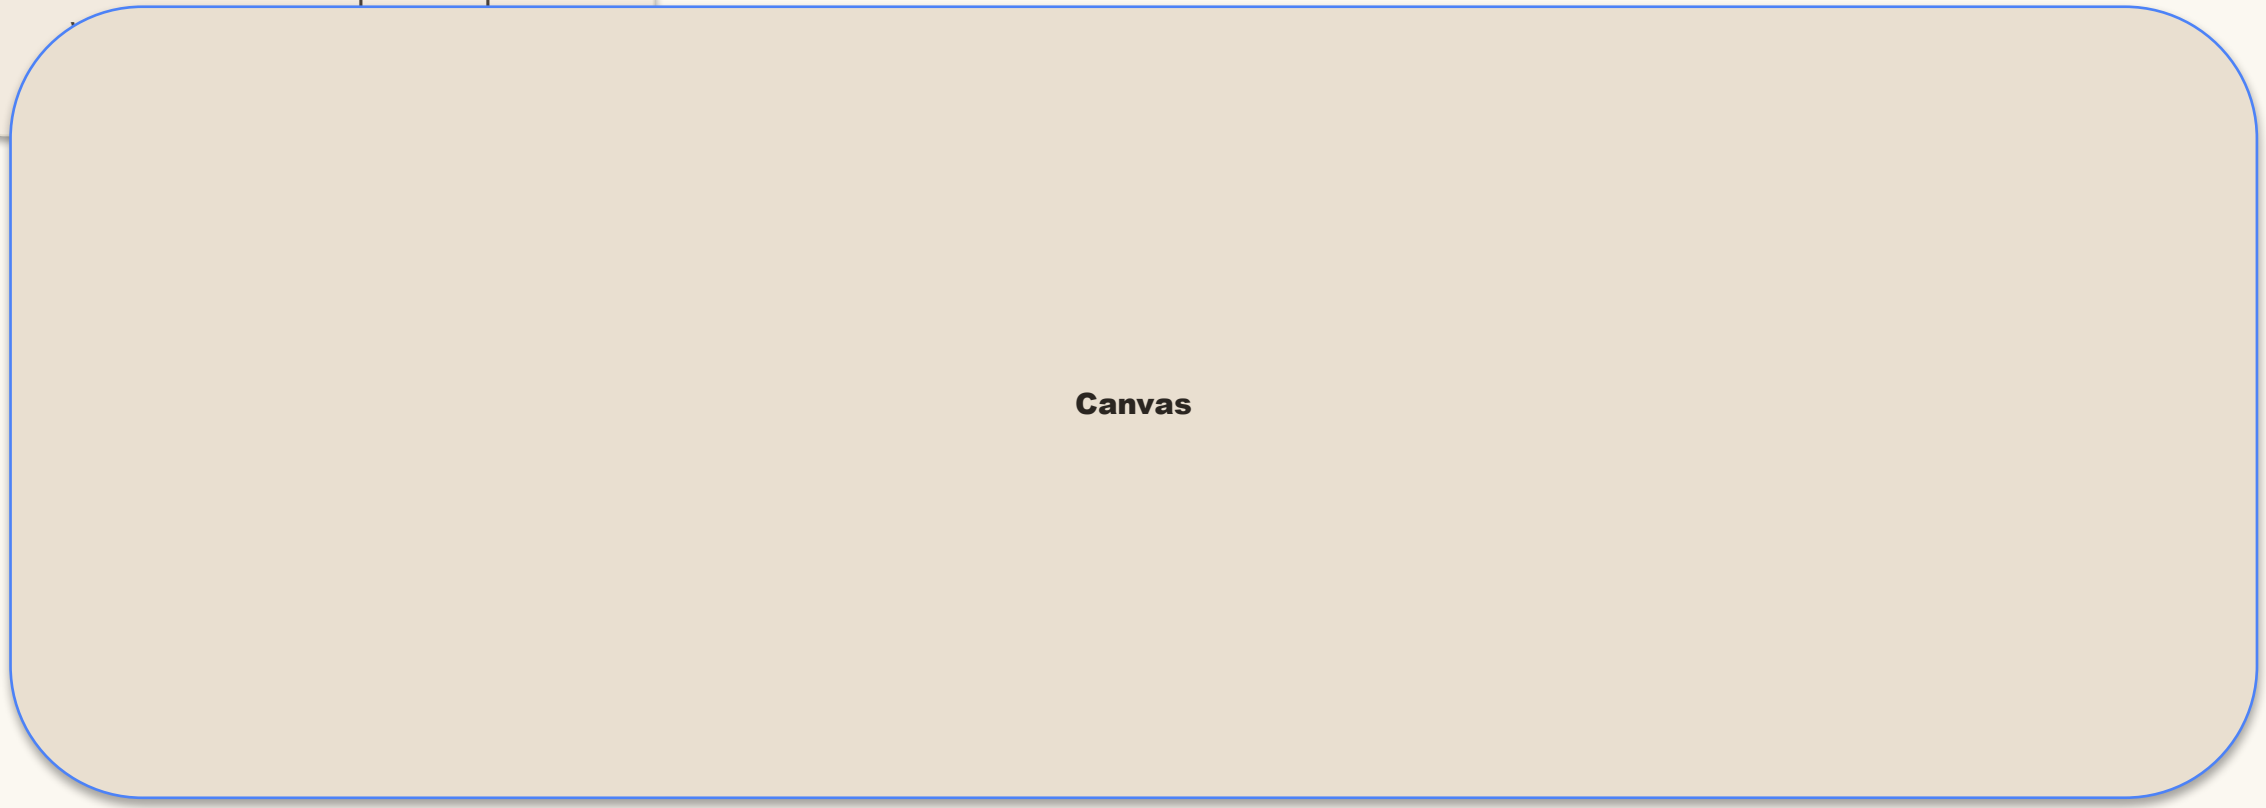

Shared contracts make builder differences visible

One semantic deck can produce truthful, editable packages through both adapters.
Acceptance evidence is explicit and inspectable.

Contract-first: Compare outputs

来源： acceptance-source · acceptance-contract

Evidence is counted, not implied

Acceptance evidence must connect manifests to inspected packages.
Acceptance evidence is explicit and inspectable.

Slides inspected: 9

Builders exercised: 2

interaction
select

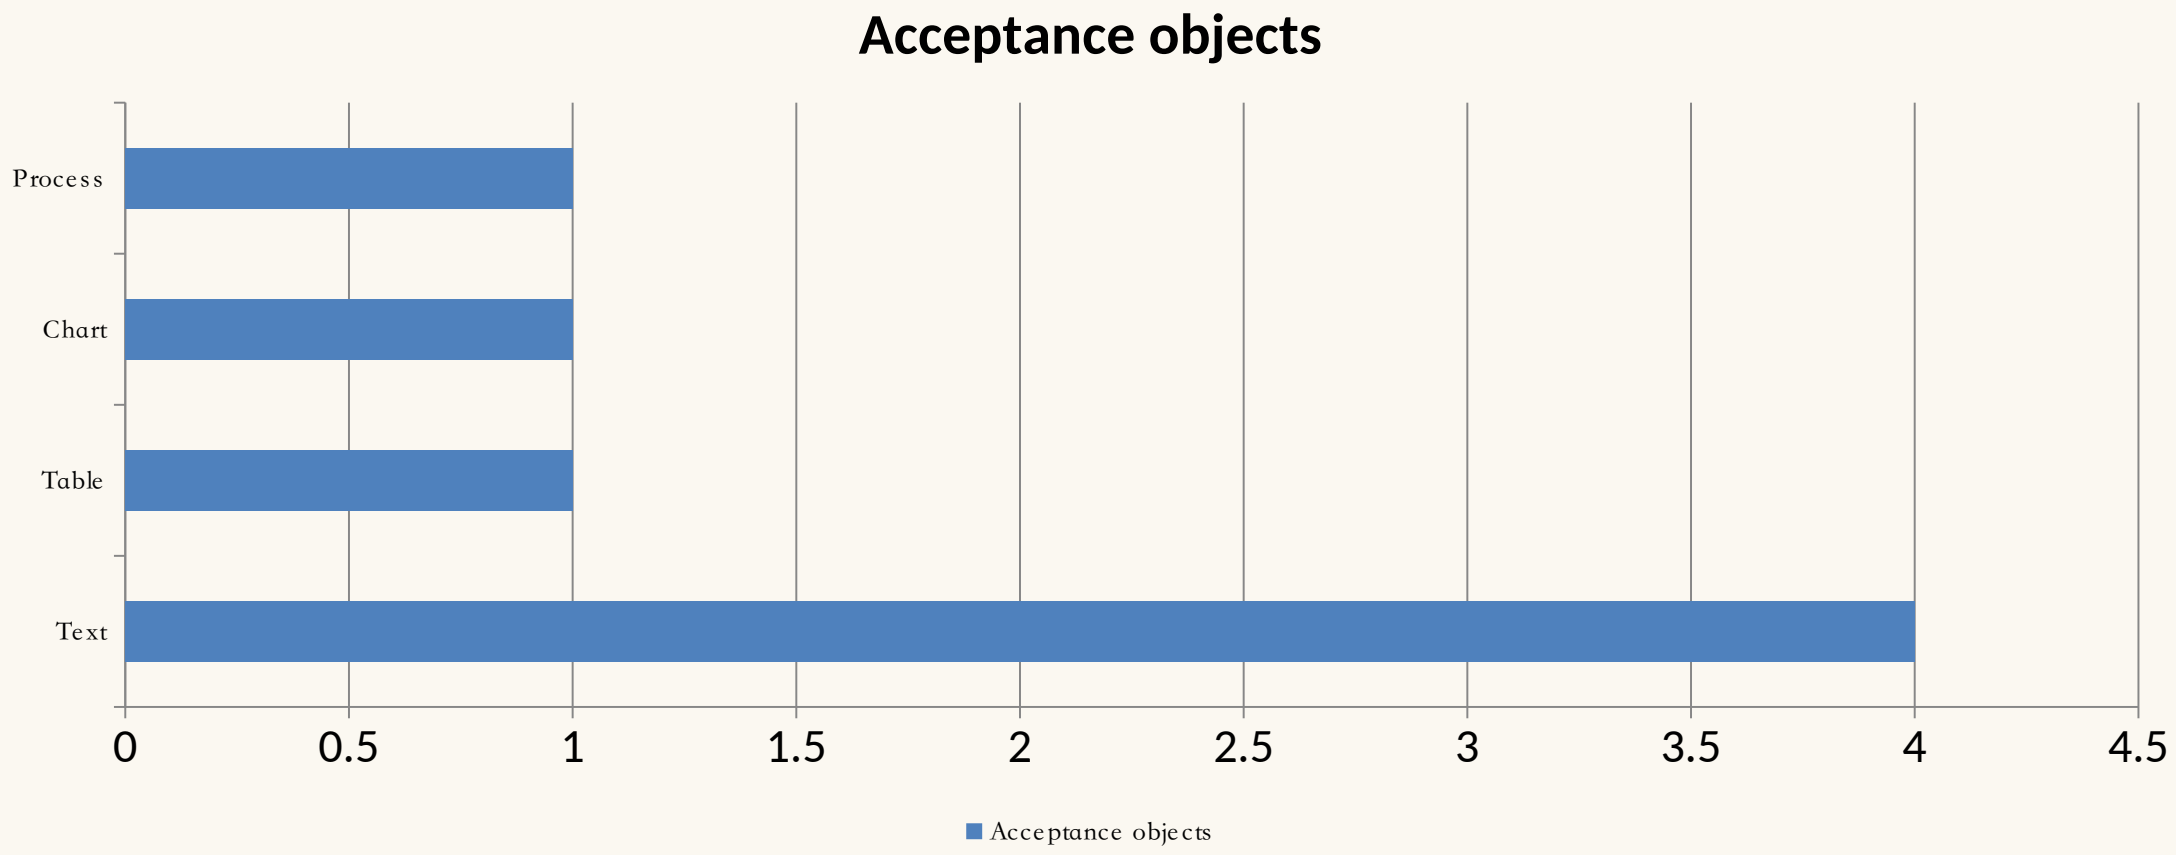

Native tables remain editable

The table is a native-required acceptance object.
Acceptance evidence is explicit and inspectable.

Contract	Expectation	Evidence
PPT IR	Shared	9 slides
Build Manifest	Truthful	Counts + routes
PPTX	Real package	Inspector passes

Builder coverage is measurable

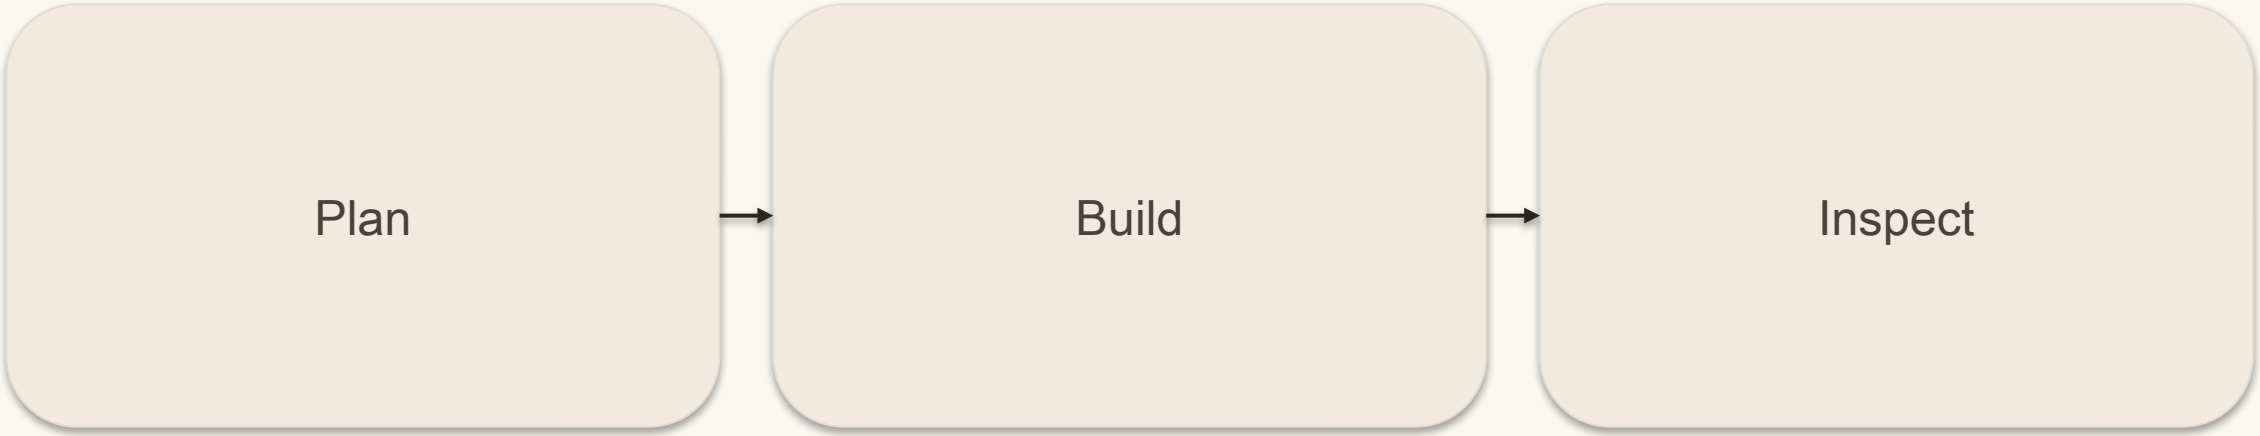

A native chart exposes route capability differences.
Acceptance evidence is explicit and inspectable.

来源： acceptance-source · acceptance-contract

A simple process closes the evidence loop

Plan, build, and inspect are all required.
Acceptance evidence is explicit and inspectable.

来源： acceptance-source · acceptance-contract

Comparability does not require identical rendering

Comparable evidence is stronger than pixel identity.
Acceptance evidence is explicit and inspectable.

Equal semantics: Same IR and slide count

Truthful evidence: Actual routes and fallbacks

Implementation is a repeatable three-step gate

Acceptance evidence is explicit and inspectable.

Run the gate: Validate contracts, build both, inspect both

来源： acceptance-source · acceptance-contract

Ship only what the packages prove

Both builders must create nine-slide PPTX packages with complete native-required objects.
